## About Point of Use (POU) Water Coolers

A Waterlogic point of use water dispenser is connected to the mains and uses your existing supply of Manx water, with no need for plastic bottles. Each point of use water cooler is designed specifically to deliver water free from contaminants and chlorine, whenever you want it.

- ✓ **FREE unlimited water from £7.50 per week**
- ✓ An unlimited supply of pure, fresh, delicious chilled, ambient or sparkling Manx water
- ✓ Hygienic water guaranteed – with no scope for bacteria growth or contamination from dirty handling.
- ✓ Reduces the need for plastic bottles
- ✓ No need to store bottles
- ✓ Less wasted time, fuel usage and traffic congestion because you are free of constant bottle delivery hassles.
- ✓ No heavy lifting of bottles needed
- ✓ Cost savings

The Waterlogic range of dispensers are coated with

which protects the plastic surfaces surrounding the dispensing areas by inhibiting the growth of bacteria.

**ThirstPoint**

**WL2500**

**WL4 Firewall**

CO<sub>2</sub> cylinder £25 + vat

## Environmental Impact

- No more plastic bottles
- Reduced dependence on oil-derived plastics
- Zero emissions caused by transporting water bottles
- Better energy performance (machines Energy Star rated and/or have a low power sleep mode)
- All chemicals used in production by Waterlogic are non-toxic and environmentally friendly
- Waterlogic machines made with easily recyclable plastics.
- Waterlogic water dispensers use a natural non toxic refrigerant gas in their compressors

## What is the Carbon Reduction label?

The Carbon Trust certifies the total amount of carbon dioxide (CO<sub>2</sub>) and other greenhouse gases emitted by a product or service at every stage throughout its life cycle. This includes manufacture, transportation, installation, service, usage and final disposal. It provides an accurate, independent and verifiable measure of the greenhouse gases emitted by the certified products.

## Why is it important?

Energy saving water is increasingly becoming a concern for many organizations. By having certified a CO<sub>2</sub> footprint for the Waterlogic water dispenser service we're now able to provide information allowing customers to make informed, sustainable purchasing decisions and meet their own environmental targets.
